

## Rehabilitation: Improving the Lives of Individuals Living with MS

These free, virtual, CE (.15 credits each) courses are for physical, occupational, and speech therapists looking to gain a better understanding of how to address the unique needs of patients living with Multiple Sclerosis (MS). Prior to the course, participants will review prerequisites covering the basics of MS including symptoms, treatment, resources, and traditional rehabilitation examination approaches. The course will consist of one session per week for two consecutive weeks, covering the experience of the patient and the role of the rehabilitation provider in improving brain health in MS. Break out rooms each week will allow for individual disciplines to integrate learning in respect to their roles.

\* It is strongly encouraged that attendees attend both sessions to obtain more comprehensive and cohesive information related to rehabilitation approaches in MS.

**Level of Attendee Experience:** Basic to Intermediate

**Pre-requisites:** Suggestions upon registration

**Presented By:** Valerie Block BSc, PT, DPTSc; Angelina Ciaverella PT, DPT, NCS; Rebecca Cunningham OTD, OTR/L, MSCS; Brian Hutchinson PT, MSCS; Shaina Meyer OTR/L, MSCS, Sherry Perucho, CCC-SLP

**July 14, 2021 at 5:00 – 6:30 PM PST Experience of the Patient**
